VARIETIES:

STUART is an old favorite that has been widely tested. This is a safe variety to plant and succeeds over a wider territory than probably any other variety.

SCHLEY is placed by some at the head of the list. It is a large, thin-shelled nut of fine flavor, and is well filled with meat. Liable to scab near the coast.

FROTSCHER is a large, thin-shelled nut, which has been widely planted.

MONEYMAKER is an early and prolific bearer, and a healthy, vigorous grower. It is proving a very profitable commercial variety. Rapidly growing in favor.

SUCCESS is a nut of fine flavor. Originating in Mississippi, it has been widely disseminated during the last few years.

PABST is a safe nut; and while not quite so large as some of the above, yet it is a good bearer and one can hardly make a mistake in setting it.

MOORE is a medium size nut, but is an early, prolific and regular bearer. Especially recommended for lighter soils in the southern part of the pecan belt.

NELSON is probably the largest pecan grown. It is a strong, vigorous grower, and an early and prolific bearer. Its shell is thick.

CURTIS is a very thin-shelled nut with sweet meat of excellent flavor. An old variety which has quite recently come back into favor.

TECHE is another old variety which popular demand has brought back into nursery production. A medium-sized, prolific variety of good quality. Most popular variety in the Albany, Ga., section. Supply of trees limited.
